DECLARATION OF COMPLIANCE IN ACCORDANCE WITH RoHS EUROPEAN DIRECTIVE 2002/95/CE from January 27th 2003

The RoHS Directive (Restriction of use of certain Hazardous Substances) applicable since July 1st 2006 restricts the use of six substances considered as dangerous for the environment.

- Lead
- Mercure
- Hexavalent Chrome
- Cadmium
- Flame retardants :
 - Polybrominated biphenyle (PBB)
 - Polybrominated diphenyl ether (PBBE)

As per the directive RoHS, the maximum concentration value in homogeneous material is equal to 0.1% by weight for each of the above listed substances, except Cadmium for which the maximum concentration is 0.01% by weight.

As constantly focused on protection of the environment, UNIC SAS has decided from 2005 to find new material and new engineering processes in order to warranty the conformity of its products with the RoHS Directive:

- We require from our suppliers of components to respect the requirements of the Directive
- We set up processes to warranty and to control the compliance
- We periodically proceed to some laboratory tests (screening, X-ray fluorescence, chemical analysis)

The President
UNIC SAS
